

MQ-E3-C2H6S Electrochemical sensor

Manual

(Model: MQ-E3-C₂H₆S)

Version 1.2 Issue date. 1st of May 2014

Taiyuan Tengxing sensor technology Co., Ltd

MQ-E3-C₂H₆S gas sensor

MQ-E3-C2H6S electrochemical sensor detect gas concentration by measuring current based on the electrochemical principle, which utilizes the electrochemical oxidation process of target gas on the working electrode inside the electrolytic cell, the current produced in electrochemical reaction of the target gas are in direct proportion with its concentration while following Faraday law, then concentration of the gas could be get by measuring value of current.

1.Features

- * Low consumption
- * High precision
- * High sensitivity
- * Wide linear range
- * Good anti-interference ability
- * Excellent repeatability and stability

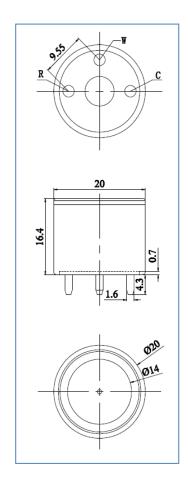

2 Application

Widely used in petroleum and petrochemical, medical and environmental protection fields

3. Technical Parameter

4. External dimension

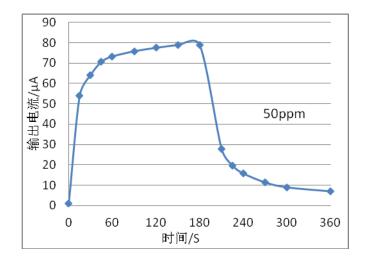

Parameter
C₂H ₆ S
0∼100ppm
200ppm
(1.6±0.5) μA/ppm
0.1ppm
<120S
300mV
10 Ω
<2% output value
<2%
linear
4ppm
-20℃~50℃
15%~90%RH
(non condensation)
90-110
2 years

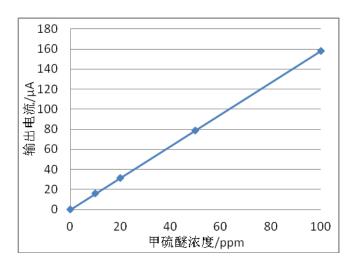

5. Characterization

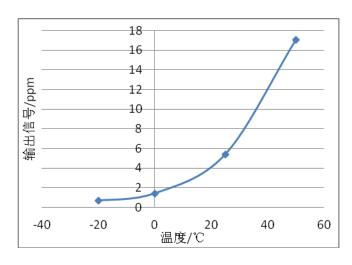

Features of Sensitivity, response and output signal

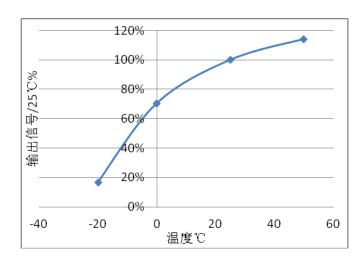

Data graph of concentration linearity features

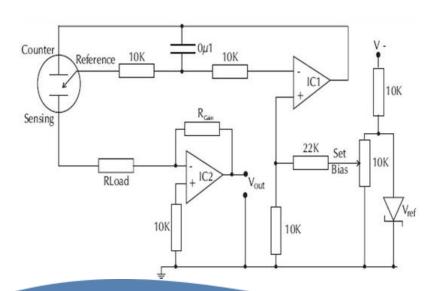

V0 Change upon Variable Temperature

Sensitivity upon variable temperature

6.Basic circuit

7. Anti-Interference:

MQ-E3-C₂H₆S sensor also responds to other gases besides C₂H₆S. Below are the response characteristics of interferential gases

Gas	Concentration	MQ-E3-C ₂ H ₆ S
CH2CHCL	100 ppm	63ppm
(C2H5)2O	50 ppm	11ppm
СНЗСООН	50 ppm	7ppm
C6H6	50 ppm	12ppm
C7H8	50 ppm	19ppm
C8H10	50 ppm	25ppm
CHCL3	50 ppm	7ppm
CH2O	10ppm	80ppm
СО	200 ppm	52ppm
C2H5OH	300 ppm	155ppm
H2S	50 ppm	55ppm
SO2	20 ppm	6ppm
CL2	10 ppm	0.5ppm

8. Application Notes:

- Sensor shall Avoid organic solvent, coatings, medicine, oil and high concentration gases:
- All MQ-E Sensors shall not be encapsulated completely by resin materials, and shall not immerse in oxygen-free environment, otherwise, it will damage the function of sensor;
- All MQ-E sensors shall not be applied in corrosive gas environment, or the sensor will be damaged
- Please test the sensitivity of gas sensors in clean atmosphere;
- Sensors Shall be avoided to face the gas, which flow directly from front side;
- To avoid to bend and break of pins;
- Blowhole of the sensor should not be blocked and polluted, which will cause the sensitivity decrease;
- Excessive impact or vibration should be avoided;
- Do not use the sensor when the shell is damaged;
- It takes some time for the sensor to return to normal state After applied in high concentration gas:
- Do not take apart the sensor, otherwise electrolyte leakage can cause sensor damage;
- Working electrode and reference electrode of the sensor shall be in short circuit when stored.;

■ To preheat over 48hs before using and soldering forbidden;
